

Plateforme TXM - Bug # 3286

Statut:	Rejected	Priorité:	Normal
Auteur:	Alexey Lavrentev	Catégorie:	Commands
Créé :	29/09/2022	Assigné à:	
Mis-à-jour :	30/01/2024	Echéance:	
Sujet:	Corpus Download command not working unless the binary corpus is manually placed on the server		
Description			
A click on the "download" button opens a blank page with the URL https://txm-xxx.huma-num.fr/txm/Download?path=/CORPUS&#38;type=txm It works properly (file Download dialog opens) if the "corpus.txm" is placed in the "zip" folder on the server (workaround). The file should be generated on the first call of the command or upon corpus load on the portail. Additional questions: - Why the file name is in lower case while TXM RCP uses upper case for export? - Why there is a double slash in all API command URLs? The URLs work, but the double slash looks like a bug			

Historique

#1 - 29/09/2022 11:12 - Alexey Lavrentev

- Statut changé de New à Rejected
