

Plateforme TXM - Task # 3298

Statut:	New	Priorité:	Normal
Auteur:	Matthieu Decorde	Catégorie:	UI / Editor
Créé :	12/10/2022	Assigné à:	
Mis-à-jour :	12/10/2022	Echéance:	
Sujet:	tabulated results, protect TXM from tables with large number of columns (> 100)		
Description			
Currently TXM's behavior with > 100 columns in Partition Index, Lexical Table, Specificities, AFC data tables depends on machine dimensions, Java version, OS, etc. For > 1000 columns behavior is unpredictable. Some projects need > 1000 columns (eg number of respondents to a survey).			
Solution			
Paginate tabulated results columns: - display for $n = 0..n$ from $n \times \text{MaximumNumberColumnsToDisplay} + 1$ to $n \times \text{MaximumNumberColumnsToDisplay} + 1$ columns in tables - add first, previous, next, last columns page navigation buttons to tabulated results			
Solution 3			
Virtualize lines AND columns in tabulated results.
