| <b>Description</b>                                                                                                                                          |                               |                   |            |
| TXM 0.8.3 (2023-06-20 12h07)                                                                                                                                |                               |                   |            |
| First step: Annotation                                                                                                                                      |                               |                   |            |
| In the POLLUTION-HEALTH-221110-EDITE corpus (500 000 words), I compute a concordance for [enlemma="Air"]                                                    |                               |                   |            |
| (42 occurrences in 4 texts representing the main part of the corpus, 470 000 words)                                                                         |                               |                   |            |
| For all these 42 occurrences ("Tous" button), I correct the enlemma to "air".                                                                               |                               |                   |            |
| Content of the console:                                                                                                                                     |                               |                   |            |
| Affectation de la valeur air à la propriété enlemma pour 42 occurrences.                                                                                    |                               |                   |            |
| 42 .....1.....2.....3.....4..                                                                                                                               |                               |                   |            |
| Second step: Saving attempt                                                                                                                                 |                               |                   |            |
| Then I save with the command Corpus > Enregistrer les annotations CQP, with the default settings (textes à traiter = modifiés, Mettre à jour les éditions). |                               |                   |            |
| The process goes on during the first minute:                                                                                                                |                               |                   |            |

| Démarrage du module d'import "xtz"...                                                                                                                       |                               |                   |            |
| Then nothing else happens except the fan noise.                                                                                                             |                               |                   |            |
| Progression is stuck at the 2% level.                                                                                                                       |                               |                   |            |
| I decided to stop the process after 1 hour.                                                                                                                 |                               |                   |            |
| Cancelation failed. The exit (Quitter) command worked.                                                                                                      |                               |                   |            |
| Same result without "edition update" (on a shorter test duration, about 15 minutes).                                                                        |                               |                   |            |
| <b>Solution</b>                                                                                                                                             |                               |                   |            |
| The import module is taking a lot of time to read the metadata.ods file because of virtual lines/columns.                                                   |                               |                   |            |
| Workaround: recreate the metadata.ods file using the selection of the actual lines                                                                          |                               |                   |            |
| Solution: Fix the code or update the odftool library                                                                                                        |                               |                   |            |
| <b>Demandes liées:</b>                                                                                                                                      |                               |                   |            |
| lié à Bug # 3455: Import, stuck when reading some metadata.ods files                                                                                        |                               |                   |            |
