Mis-à-jour :	13/10/2023	Echéance:	
Sujet:	Export, file extension management		
Description			
Currently the result export tool adds the format extension after the file name [SLH: sure? "IF the extension is not the right one"].			
Solution A)			
Discuss extension management when exporting results: A- don't change the extension > the user knows what he does B always add the extension IF the extension is not the right one (TXM 0.8.x) Ca- always replace the extension with the export format Cb- always replace the extension with the export format unless the extension is not managed by TXM export D- ...			
Solution B)			
1- remove any file extension present in filename 2- put the extension of the format asked for
