

Plateforme TXM - Task # 3462

Statut:	New	Priorité:	Normal
Auteur:	Serge Heiden	Catégorie:	Diagnostic and optimization
Créé :	13/10/2023	Assigné à:	
Mis-à-jour :	30/01/2024	Echéance:	
Sujet:	permissions, add semantic tests to validation on saving		
Description			
Currently, TXM portal only validates a permission file of a profile with respect to a XML schema. This is better than only checking XML syntax (previous version) but validation would help administrators much more with small additional controls on some of the open vocabulary of the XML schema. For example, valid corpus PATHs. Currently if you misspelled a corpus name in a PATH administrators don't get any warning and users can't access the ressource at all while the fundamental role of the permission is to control the access to the ressource.			
Solution			
Check some constraints on some of the open vocabulary of the XML schema: first priority, checking corpus PATHs.
