Sujet:	GWT 0.6.3, Automatically retrieve and use server name instead of manually define it in txmweb.conf		
Description			
GWT 0.6.3, Automatically retrieve and use server name instead of manually define it in /usr/share/tomcat9/TXMWEB/txm/txmweb.conf. It will simplify the configuration and the work with dev and production machines. eg. if manually defined in a dev VM: portal_address=https://txm-dev.machine.fr/txm/ must be manually changed after the deployment to: portal_address=https://txm-prod.machine.fr/txm/
