Sujet:	TXM version signature, add operating system version		
Description			
Currently the TXM version full signature (eg at startup) is "TXM 0.8.3 (2023-11-07 09h15)". This doesn't allow to interpret some bug scenarios.			
Solution			
Add operating system version information to signature. For example information provided by the debug/OperatingSystemVersion utility: <pre>os.name = Linux os.version = 5.15.0-88-generic os.arch = amd64</pre> Producing the following full signature: TXM 0.8.3 (2023-11-07 09h15) Linux, 5.15.0-88-generic, amd64
