

Plateforme TXM - Task # 3528

Statut:	New	Priorité:	Normal
Auteur:	Matthieu Decorde	Catégorie:	UI
Créé :	06/12/2023	Assigné à:	
Mis-à-jour :	06/12/2023	Echéance:	
Sujet:	Tables, more accurate column widths		
Description			
Currently the tables column width is computed using the characters length of the title and content * font height * factor			
Solution			
Use one of the SWT width compute method (to be tested) :			
- Point p = label.computeSize(SWT.DEFAULT, SWT.DEFAULT); - GC gc = new GC; Point size = gc.textExtent("Helloooooooooooooooooooooo");
