

Plateforme TXM - Task # 3530

Statut:	Closed	Priorité:	Normal
Auteur:	Matthieu Decorde	Catégorie:	Debug
Créé :	08/12/2023	Assigné à:	
Mis-à-jour :	26/01/2024	Echéance:	
Sujet:	Build non-interfering standalone test products		
Description			
Standalone builds should work when a TXM is already installed (=dependencies are solved and all necessary libraries are installed) without using the TXM stable installation files. This will : - simplify TXM test procedure - avoid files conflicts with the already installed stable versions of TXM			
Solution			
Change TXM product default "configuration", "user" and "instance" directories in order to use local files instead of the "~/TXM-X.Y.Z" and "~/TXM-X.Y.Z" directories A Standalone build is a ZIP archive of the Eclipse product build. To test, the tester needs to : - extract the product - run TXM using the launcher binary file			

Historique

#1 - 08/12/2023 14:53 - Matthieu Decorde - Sujet changé de Build non-interfering standalone test builds à Build non-interfering standalone test products
#2 - 18/12/2023 09:56 - Matthieu Decorde - Version cible changé de TXM 0.8.4 à TXM 0.8.3
#3 - 18/12/2023 09:57 - Matthieu Decorde - % réalisé changé de 0 à 80
#4 - 26/01/2024 11:17 - Sebastien Jacquot - % réalisé changé de 80 à 100
#5 - 26/01/2024 11:21 - Sebastien Jacquot - Statut changé de New à Closed
